Customer & Sales Analysis Report

Executive overview of customer churn, customer value, and sales performance

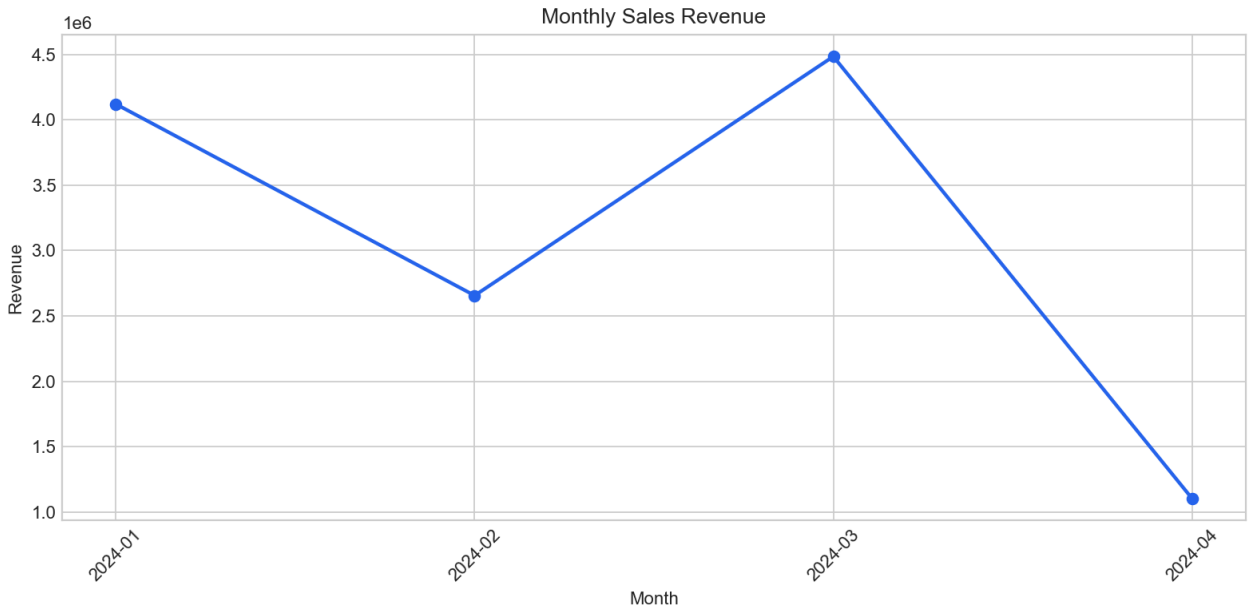

$12,365,048	10.6%	500	Laptop
Sales revenue	Observed churn	Customer records	Top product

Executive summary

The sales sample recorded **$12,365,048** across 100 transactions, with an average transaction value of **$123,650**. The churn dataset contains 500 customer records and an observed retention rate of **89.4%**.

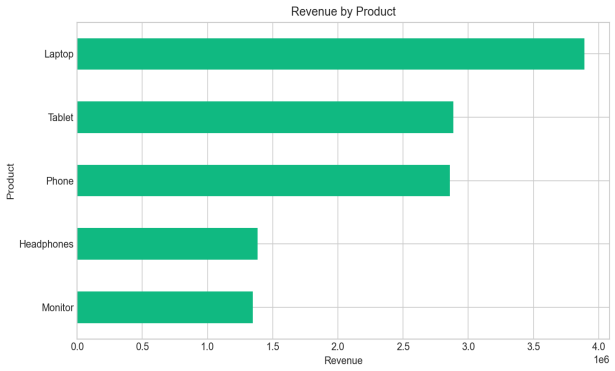

The highest estimated customer lifetime value is **C00179 at $13,124**, calculated as monthly charge multiplied by observed tenure. Laptop led product revenue, and North led regional revenue. Month-to-month customers had the highest observed churn rate at 20.6%.

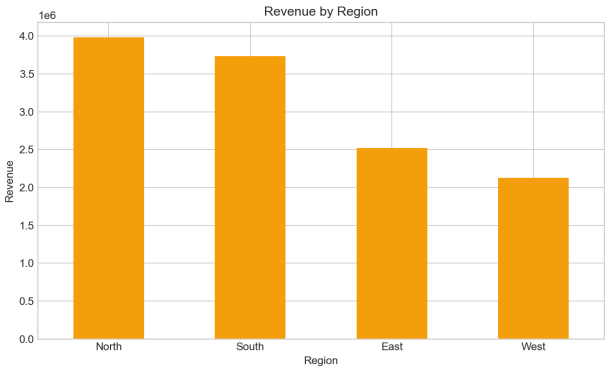

Sales performance

Monthly revenue across the supplied 100-day sales sample. The four-month period is too short to establish a dependable seasonal pattern.

Product and regional results

Product	Revenue	Units
Laptop	$3,889,210	136
Tablet	$2,884,340	127
Phone	$2,859,394	101
Headphones	$1,384,033	48
Monitor	$1,348,071	66

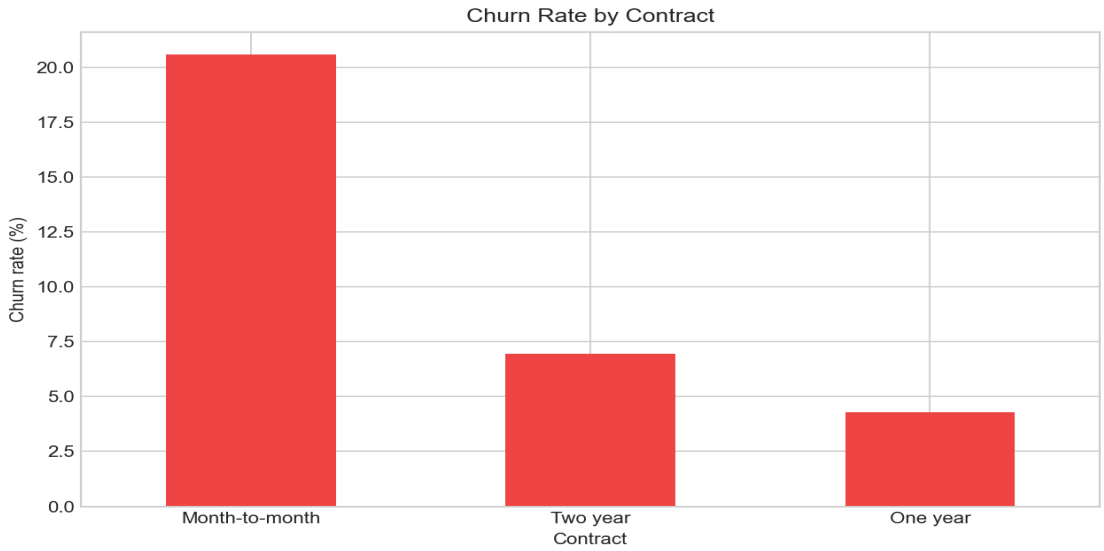

Region	Revenue	Units
North	$3,983,635	147
South	$3,737,852	143
East	$2,519,639	94
West	$2,123,922	94

Laptop generated the most revenue ($3,889,210). North was the leading region ($3,983,635).

Customer value and retention

Top customers by estimated lifetime value

Customer ID	Tenure (months)	Monthly charges	Estimated value
C00179	68	$193	$13,124
C00275	66	$196	$12,936
C00268	69	$177	$12,213
C00051	71	$172	$12,212
C00218	67	$182	$12,194

Churn rates by contract

Contract	Customers	Churn rate	Retention rate
Month-to-month	170	20.6%	79.4%
One year	186	4.3%	95.7%
Two year	144	6.9%	93.1%

Recommendations and data limits

1. Prioritize service review and retention outreach for month-to-month customers, then measure churn after interventions.

2. Use high-value customers as an initial loyalty segment and validate the lifetime value estimate against billing history.

3. Review stock and promotion plans for leading products and regions; use longer historical coverage for seasonal planning.

4. Add a shared customer key across sales and churn datasets to connect purchase behavior with retention outcomes.

5. Capture order or basket IDs and multiple product lines per order to enable product affinity and cross-selling analysis.

Data notes

The supplied CSVs contain 500 customer rows and 100 sales rows, with no missing cells or duplicate rows. Sales dates span 2024-01-01 to 2024-04-09. Each date has one product row and there is no order/basket ID, so products bought together cannot be determined. Customer IDs use different formats between the files and cannot be reliably joined. Estimated lifetime value is monthly charges multiplied by tenure, a proxy rather than a forecast.
